## Reconstruction project of the road located on the Vytauto st. KT8029, KT8091, Kretinga city (the segment of the Melioratorių st. crossroad till the intersection of the main road No. A11 Šiauliai - Palanga).

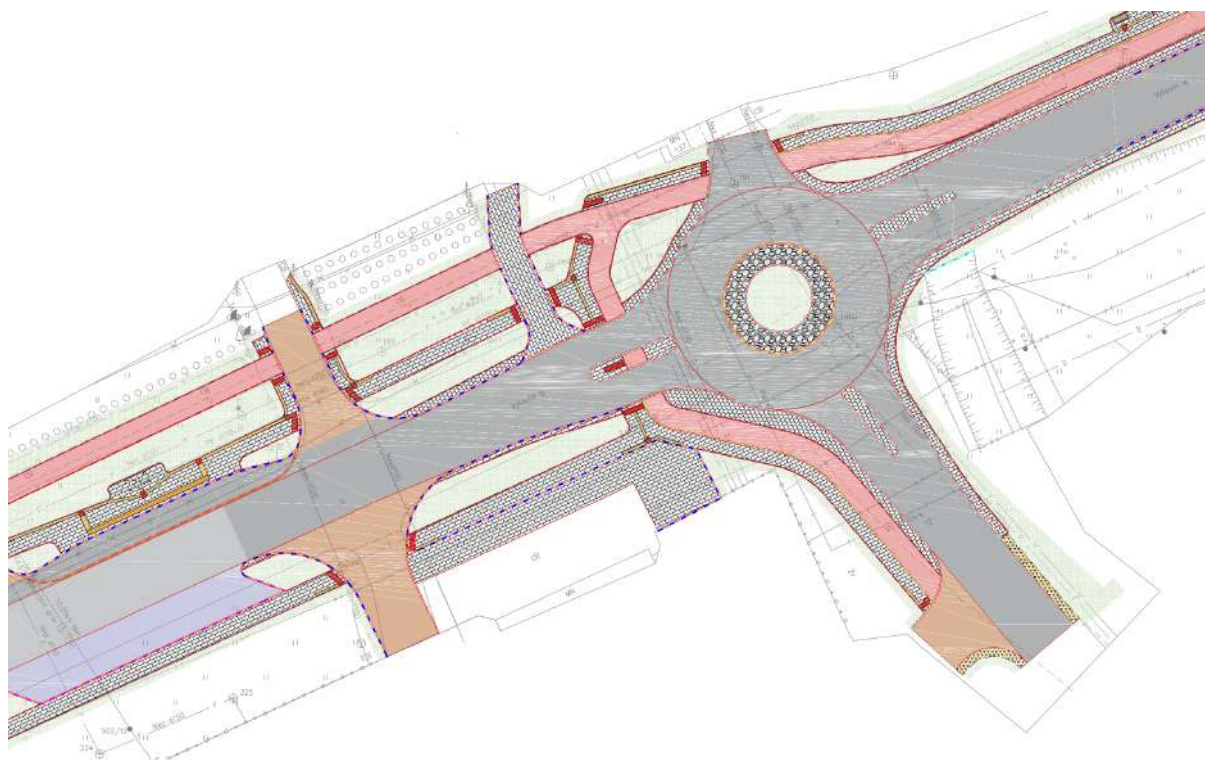

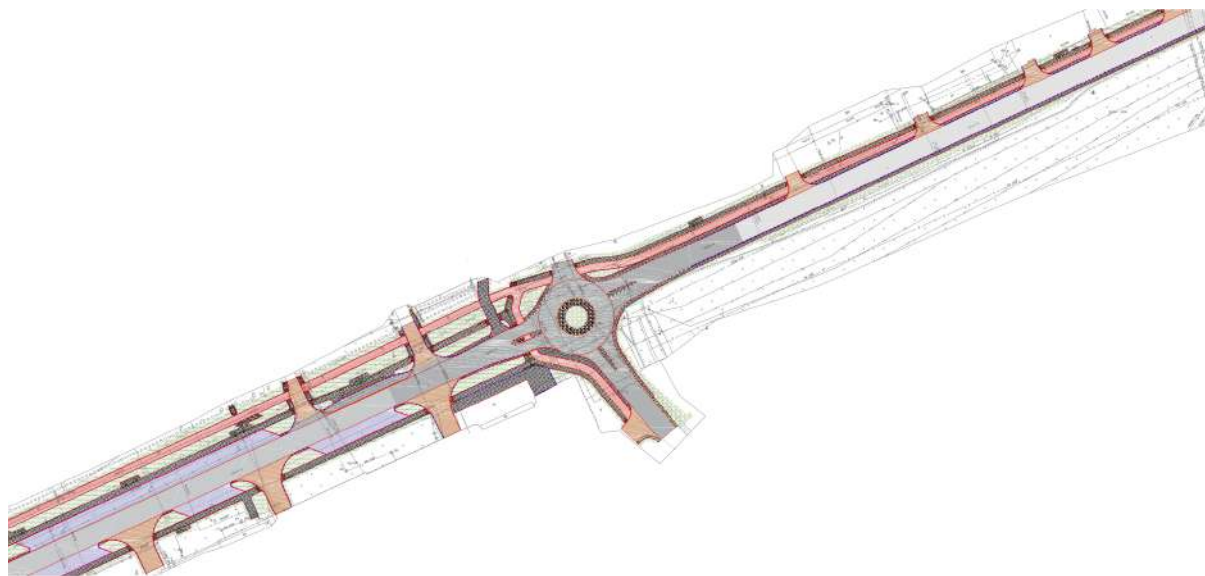

**Start of design:**  
2019, II quarter

**End of design:**  
2020, II quarter

Vytauto Street is located in the north-eastern part of Kretinga city. Reconstruction of the street includes installation of the new parking lot areas, sidewalks and cycling trails. Sidewalks and cycling routes are designed along the road and on both sides of the street. In the intersection of Mykoklos st. the new roundabout is designed. The project also included a new rain collection system and installation of the LED lighting fixtures along the street.

Reconstruction project of the road located on the Vytauto st. KT8029, KT8091, Kretinga city (the segment of the Melioratorių st. crossroad till the intersection of the main road No. A11 Šiauliai - Palanga).

# Reconstruction project of the engineering networks and structures at Lakūnų str. 3, Šiauliai city.

**Start of design:**  
2019, IV quarter

**End of design:**  
2020, II quarter

**Expected start of construction:**  
2021

Šiauliai Airport is located 7 km at the southeast of the centre of Šiauliai. Šiauliai International Airport is a civil and military airport located at Zokniai aerodrome. The project aims to expand the existing aircraft platform by installing an engine test site. The new scheme proposes a wider taxiway by expanding current width from 12 to 23 meters. The project also contains new solutions of a surface rainwater collection systems, 20 m height lighting towers for the platform are designed. The new design also proposes horizontal and vertical markings ,and lighting systems for the taxiway.

## Preparation of the Overhaul, construction project of the Regional road no. 3802 Miknaičiai - Slavikai - Kiduliai section from 30,520 to 35,120.

**Start of design:**  
2019, IV quarter

**End of design:**  
2020, III quarter

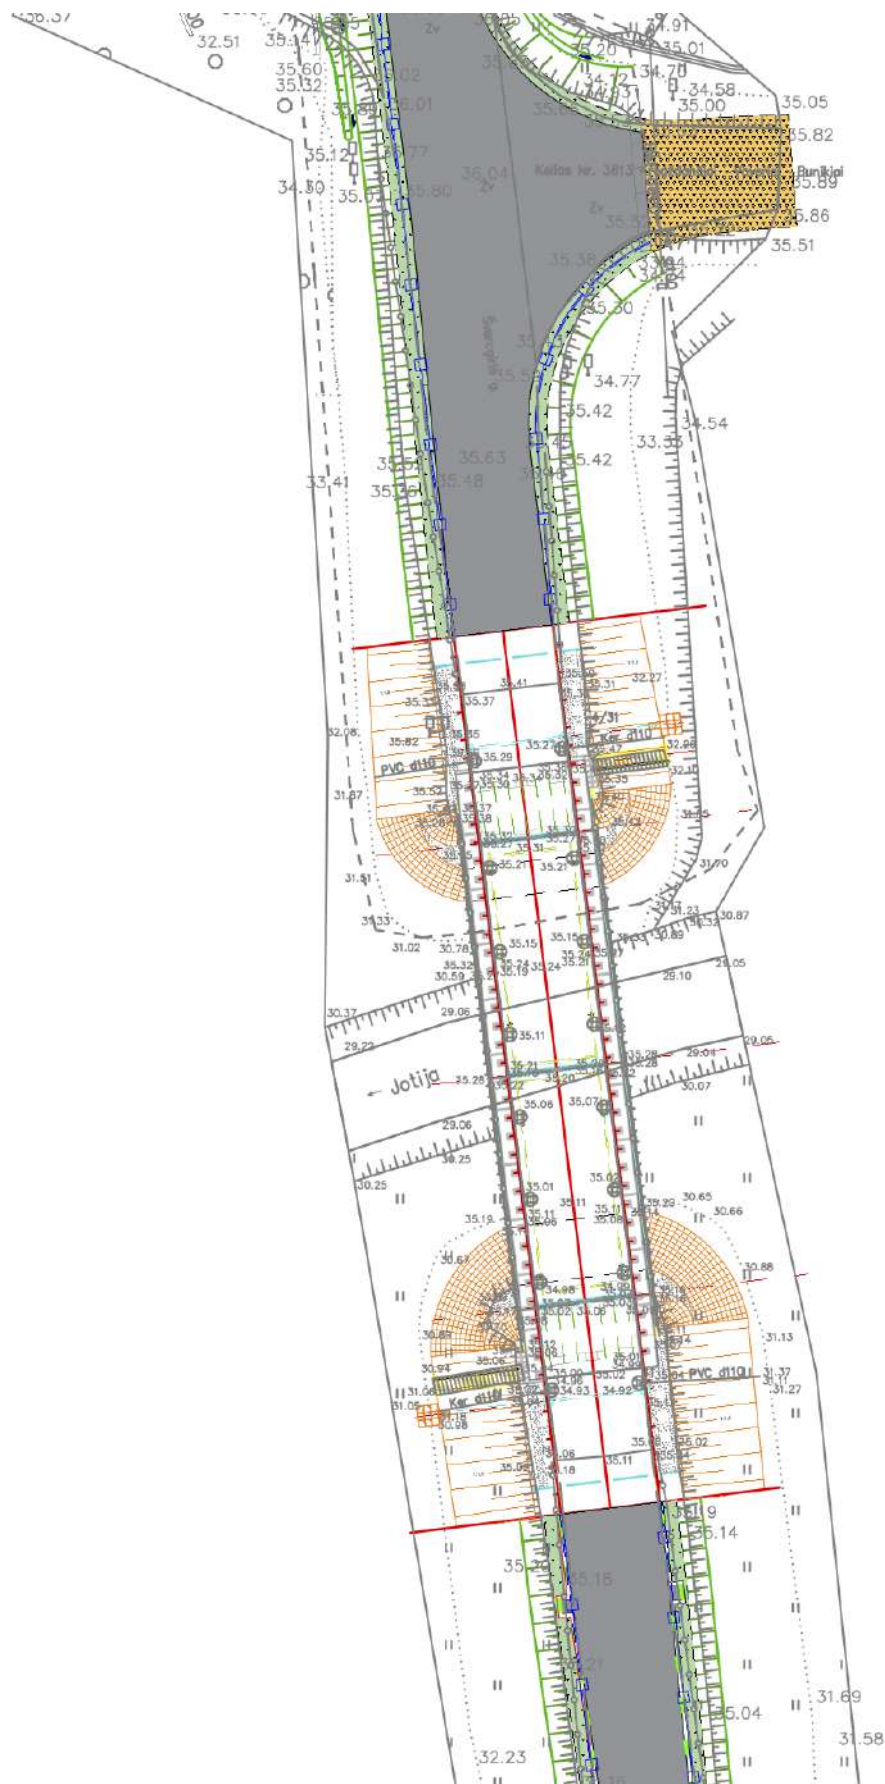

**Expected start of construction:**  
2021

The new design of the regional road No. 3802 is located in southwestern Lithuania, near the city of Jurbarkas. The projected road length is 4,584 km, the pavement width is 6.00 m. The national road is category V. During the road segment's design, the overhaul of the Jotija River's bridge was also made.

## Preparation of the car parking lot's construction project at residential square between Darius and Girėnas st., M. Valančiaus st. and Kaunas st. in Jurbarkas city.

**Start of design:**  
2020, III quarter

**End of design:**  
2021, I quarter

The newly designed area has 97 single parking spaces, newly created spaces for the community, such as recreation areas, outdoor sports gym, children's playground, and outdoor tennis. The new footpaths system is designed to maintain the integral architectural style, materiality and be functionally comfortable, combining the most important movement directions. The newly designed territory of the quarter is adapted to all age groups and their needs. New created areas give an opportunity for the elderly to rest and gather, sports and children's playground is an attraction for children and adults. The main areas of plants are designed in the central part of the courtyard.

## Preparation of a construction project for the complex arrangement of public spaces at J. Basanavičius Square in Vilkaviškis.

**Start of design:**  
2018, III quarter

**End of design:**  
2019, I quarter

**Built:**  
2020

A newly proposed pedestrian alley brings a modern face to the town of Vilkaviškis in Lithuania. The design offers a fluid compositional, multi-purpose public and green spaces structure, leading towards the new J. Basanavičius town square. Newly proposed design solutions are closely related to the existing square and its composition, connecting them into a unity. A variety of public activities is encouraged: picnics on the grass underneath a tree, a market on a Saturday morning or Christmas market during the winter. The new pedestrian alley is not only a passage but an interactive public space. The introduced flora represents wildlife and does not require any funds throughout the year to be taken care of. The project has been finished in 2020 and is opened for public use.
